

Graded Mini Project 4.2: AI-Powered Web Application

Submitted By: Czarina Oyales

FreedomPath PH

An AI-powered web app that tells Filipino working professionals how much to save, where it should go, and whether they're on track for financial freedom, including an SSS pension baseline estimate. All core deliverables are linked below, both from the public GitHub repository and from the shared Google Drive folder.

Deliverable	GitHub	Google Drive
Idea Validation Report (7-step framework)	Idea_Validation_Report.md	View in Drive folder
Product Requirements Document (PRD)	PRD.md	View in Drive folder
Spec, Architecture & AI Config (spec.md, Architecture Notes, CLAUDE.md, .cursorsrules)	spec.md Architecture_Notes.md CLAUDE.md .cursorsrules	View in Drive folder
GitHub Repository (public, README, CI/CD)	github.com/bong08-create/freedompath-ph	—
Live Deployed Application	freedompath-ph-iota.vercel.app	—
Demo Recording (2 minutes)	—	View in Drive folder
Reflection Write-up (1 page)	FreedomPath_PH_Reflection.docx	View in Drive folder

The Google Drive folder link above is live — all files (Idea Validation Report, PRD, spec + architecture notes, demo recording, and reflection) are being uploaded there as a shared, downloadable set. “—” indicates the item doesn't apply to that column (the live app and GitHub repo itself aren't duplicated to Drive).

Backup plain-text link, in case the hyperlinks above don't open:
